FileZilla

FileZilla is one of many programs that provides easy, point-and-click SFTP (secure file transfer protocol). Not only can you easily transfer files between your local computer and your virtual machine (VM), but you can also open and edit documents that are on your VM, using programs on your local computer.

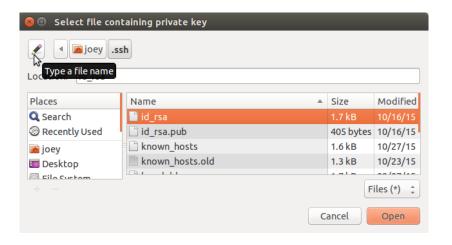

Download and Install FileZilla

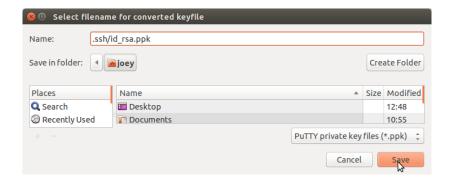

- 1. For Ubuntu Install from the Ubuntu Software Centre app
- Mac and Windows Download the program file https:
 - //filezilla-project.org/download.php?type=client
- 3. Double click file follow installation instructions for Windows
- 4. For Mac drag the filezilla.app file to your Applications folder.
- 5. Open FileZilla

Add SSH keyfile

- Click the menu options
 FileZilla OR Edit -> Settings OR Preferences ->
 Connection -> SFTP
- Click Add key file and navigate to the folder storing your SSH keys.
 - ► For Mac and Ubuntu: The keys are in '~/.ssh/' which will be hidden from view. There is a button in the window to allow you to type the address; enter '.ssh' in the input bar).*
- Choose your private key.
 FileZilla might ask to convert the fileformat. Click OK.

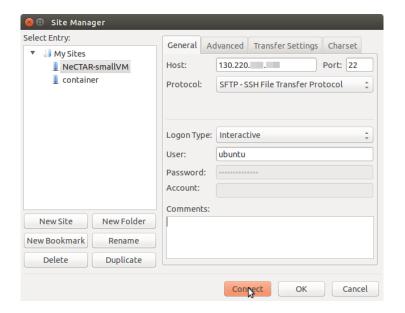

Connecting FileZilla to the VM

- 1. Open *File -> Site Manager* .
- 2. Click New Site and give it a name.
- 3. Insert the IP address of the instance as **Host**
- 4. Logon Type is interactive
- The user is 'ubuntu' (or 'host' if your VM has a different operating system)
- 6. Click Connect

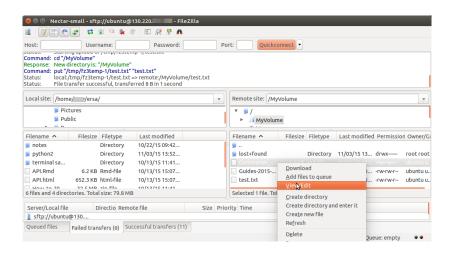

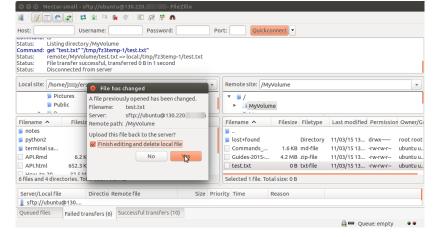

FileZilla connection

The left side of the FileZilla window will list the files of your computer.

The right side will contain the folders and files on the VM.

- Navigate to your data storage directory in the right side of the FileZilla screen.
- Drag and drop files and directories between your local computer and the VM.
- Right click in the file list area to:
 - 1. Create a directory or text file
 - Edit a text document (you may need to adjust FileZilla/Edit -> Settings/Preferences -> File Editing to ensure documents open in your local computer's default text editor.
 - 3. Delete, download or rename files or directories, etc.

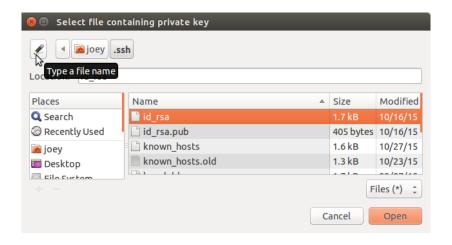

FileZilla OR Edit -> Settings OR Preferences -> Connection -> SFTP

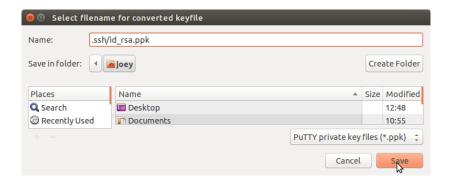

- Click Add key file and navigate to the folder storing your SSH keys.
 - ► For Mac and Ubuntu:

The keys are in '~/.ssh/' which will be hidden from view. There

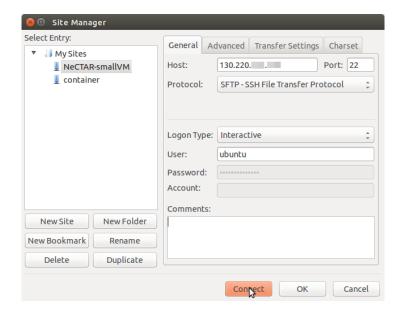

Connecting FileZilla to the VM
